

If you are unfamiliar with Steam, this guide will walk you through downloading and signing up to Steam and then downloading Engage.

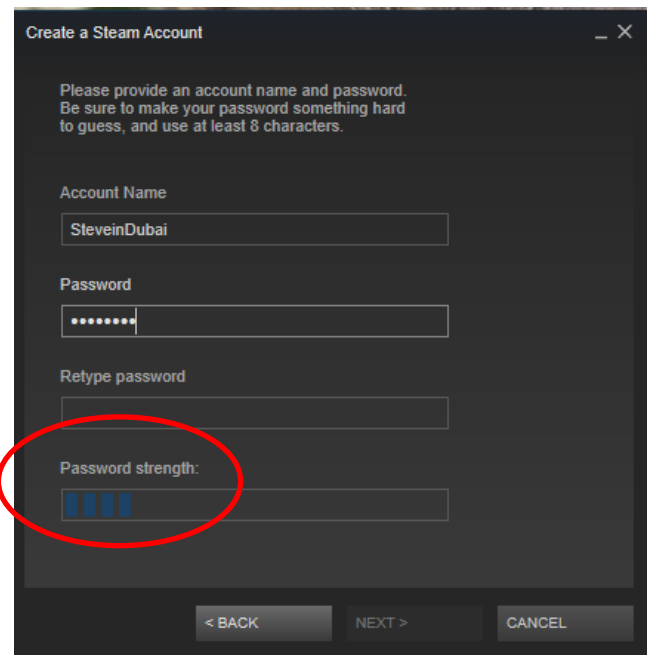

1. Head to [store.steampowered.com](https://store.steampowered.com) and click on **Install Steam** in the top right.

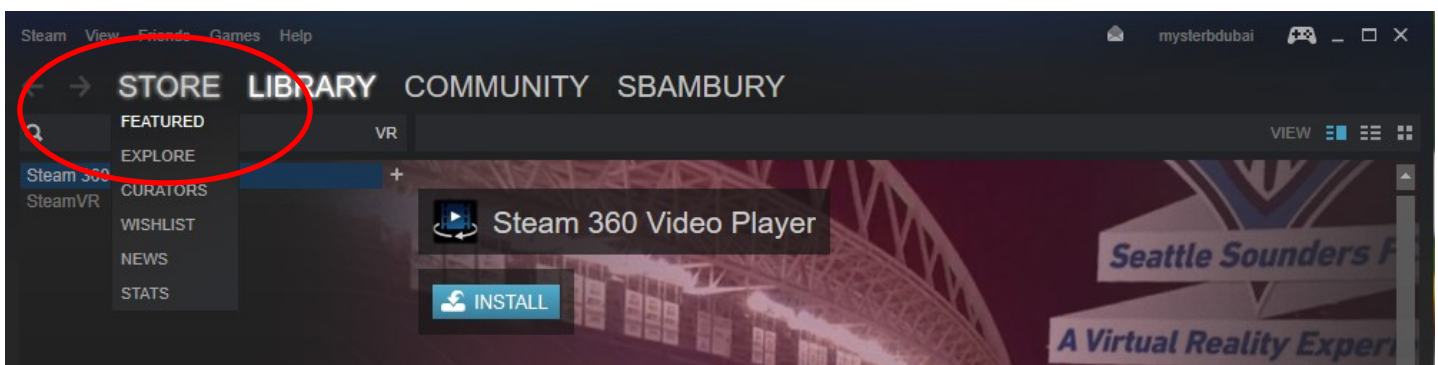

2. Click on **Install Steam Now** and allow the program file to download. Once it has downloaded open the file to complete the installation as you would with any other program.

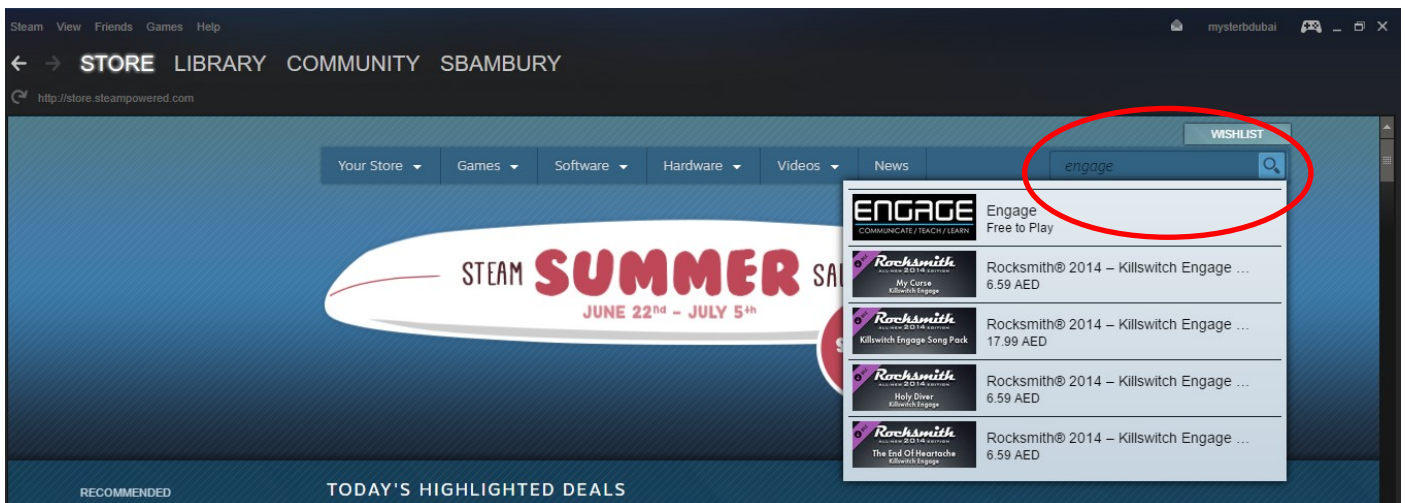

3. You will need to create a free Steam account to proceed. Please note that your **password** needs to be at least 8 characters or you may be prevented from continuing.

4. Once you have logged in, Steam will open in your library. Do not search here or you will not find anything. Instead click on **Store**.

5. In the Store area, use the **search box in the top right** to search for Engage.

6. Scroll down a little way on the Engage page to where it says Use Engage and click on the green button marked **Free**. You will now be prompted to install Engage.

7. Once Engage has fully downloaded, open the application to make sure that it is working properly.

Please remember that Engage will not run on a Mac at present.
